

**TREATING TUMORS USING IMPLANTS COMPRISING  
COMBINATIONS OF ALLOGENEIC CELLS**

ABSTRACT

5

This invention provides methods and compositions for treating tumors. The cell population is made up of alloactivated lymphocytes from the patient or from one or more third-party donors that are alloactivated in a mixed lymphocyte culture. It can be placed into the tumor bed, or combined with tumor-associated antigen for administration to a distal site as a vaccine. The compositions recruit activated participation of the host Immune system, which then reacts against the tumor and provides a level of ongoing protection. Employing multiple third party donor cells confers particular advantages in terms of effectiveness, timing, and ease of use.
